

Fortres 101 5.5 Hotfix Installation Instructions

System Requirements

- Fortres 101 5.5 connected to Central Control 4.1
- A network share that can be used as a distribution point for the Hotfix
- **IMPORTANT: In order for the Hotfix to install properly, Fortres 101 security must to be disabled on the remote computers and the computer must be logged in with a user who has write access to the Fortres 101 installation folder. Fortres 101 security can be disabled using Central Control, by disabling the Fortres 101 Security option for the group.**

Installing the Hotfix

1. If necessary, download the [Fortres 101 5.5 Hotfix](#).
2. Save the file to a network share that users can access.
3. Distribute the Hotfix using Fortres 101 and Central Control
 - a. Open the Fortres Security Interface
 - b. Click on the Central Control item under Fortres 101 5.5
 - c. In the Central Control window, select the computers to update
 - d. Press Action button and choose Execute... from the menu that appears
 - e. In the Execute Program window, enter the path to the Hotfix file saved in Step 2
4. After this Hotfix has been applied, the Upgrade feature of the Fortres 101 Central Control window will function properly.
